

## Online training for health and community care professionals about MND

### MND Aware training modules

The MND Aware training modules provide health and community care professionals with a basic understanding of motor neurone disease (MND) and the impact of MND on an individual's life.

Updated in 2018, the MND Aware online training sessions consist of:

- 9 Introductory sessions (Sessions 1-9)
- 10 Symptom management sessions (Sessions 10-19)
- 7 Wellbeing and support need sessions (Sessions 20-26)

The sessions have been specifically developed for home and community care workers, intake, information and referral officers, care coordinators, case managers, health and residential care workers. This project has been supported by MND NSW.
